VMI

RESIDENTIAL CONTROLLER

24" w x 24" h
Enclosure

Keep it simple! Everything is easier when you work with a Vertitron JTI-701 Residential Elevator Controller.

VMI residential controllers offer **standard specifications** like single automatic push button operation, up to four landings, and emergency battery lowering. Everything that's important to your customers—and nothing that isn't!

You'll find the JTI-701 is not only simple to spec but is **simple to maintain**. It's designed using relay logic and plugable terminals which allow *you* to replace those parts easily and inexpensively. And smart details, like the 10-Amp car light circuit with auto shut-off timer, extend the life of elevator car lights and minimize minor (but expensive) service calls.

The efficient design also means **short lead times**—orders usually ship within one to two weeks. All VMI residential controllers include easy-to-follow field wiring diagrams and a complete installation manual.

Vertitron offers contractors efficiency, economy, and reliability. How? Every residential controller is manufactured with **over 15 years of experience**.
